

SafeCross+

Highly efficient optimized osmolarity solution
for corneal collagen cross-linking

COMPOSITION

Riboflavin - Vitamin B2: 0,25%
HPMC: 1,00%
EDDS: 0,05%

Indications

cross-linking treatment for ectatic
diseases

Packaging

one prefilled syringe - 2 mL

SafeCross+

Highly efficient optimized osmolarity solution
for corneal collagen cross-linking

Riboflavin (Vitamin B2) 0,25 % - HPMC 1,00 % - EDDS 0,05 %

KEY FEATURES

SafeCross+ is an innovative ophthalmic solution, with an **high content of riboflavin**, specifically recommended for corneal cross-linking in thin corneas, to treat ectatic diseases.

SafeCross+ is a sterile, **highly efficient**, highly purified, non-irritating, transparent, **optimized osmolarity** solution in HPMC.

The optimized osmolarity formulation combined with an high content of riboflavin allows a safe and effective cross-linking, preserving the integrity of the corneal structure and its dimensions during the cross-linking procedure and minimizing patient discomfort.

IVIS TECHNOLOGIES

SafeCross+ is conceived by the R&S Team of iVis Technologies, the Company who has been leading customized corneal surgery to optimize quality of vision and minimize surgical invasiveness since 1993.

SafeCross+ is specific designed for cross-linking treatment of the ectatic pathologies after corneal customized laser regularization.
